Education

Padmasri Dr. B.V. Raju Institute of Technology, Medak, India August 2023 – 2027
Bachelor of Technology in Computer Science and Engineering
CGPA: 8.6/10 (Expected 2027)

Narayana Junior College, Hyderabad, India 2021 – 2023
Intermediate — 98.0%

Technical Skills

Languages: Python, C++, Java, JavaScript

Frontend: React.js, HTML5, CSS3, Responsive Design

Backend & Database: Node.js, MongoDB, MySQL

Machine Learning: Pandas, NumPy, OpenCV, Model Deployment, Data Preprocessing

Tools: Git, GitHub, VS Code

Projects

Smart Tourist Guide and Budget Planner Jun 2025 – Jul 2025
Technologies: MongoDB, React.js, Node.js, Google Maps API, Google Places API, Weather API

- Built a full-stack MERN application recommending personalized activities, dining options, and hotels based on user budget and real-time location, serving end-to-end travel planning from a single interface.
- Integrated Google Maps API, Google Places API, and Weather API to deliver live location data, venue details, and trip conditions — reducing manual research effort for users.
- Developed Node.js backend with MongoDB for user data persistence, itinerary saving, and budget tracking; built dynamic React frontend with budget sliders, map overlays, and category filters.
- Implemented real-time cost estimation and route optimization, improving overall planning efficiency and personalization.

Traffic Signal Optimization using Satellite Data Aug 2024 – Oct 2024
Technologies: Python, OpenCV, Machine Learning, NumPy, Pandas

- Developed a computer vision pipeline using OpenCV to detect vehicle density from live camera feeds and dynamically allocate signal timings in real time, reducing intersection idle time.
- Applied adaptive timing algorithms and ML-based vehicle classification across varying traffic densities and lighting conditions, improving overall traffic movement efficiency.
- Led frontend development and built the real-time signal dashboard UI used in the live demo — team qualified Level 2 at Smart India Hackathon 2024.
- Presented a technical paper on smart traffic optimization at BVRIT Engineering College; coordinated with 2+ cross-functional teams to deliver the MVP within the hackathon timeline.

Achievements & Leadership

- Smart India Hackathon 2024: Level 2 qualifier — Frontend lead for Smart Traffic Optimization project
- Presented a technical paper on Smart Traffic Optimization at BVRIT Engineering College
- Collaborated with 2+ cross-functional development teams to deliver MVPs within aggressive project timelines
- Active problem solver on LeetCode and HackerRank — focused on DSA and algorithmic challenges

Certifications

- Cisco — Programming Essentials in C++ & Python
- Simplilearn — Introduction to Generative AI
- Infosys Springboard — Basics in C and Python Programming

Interests

Coding Challenges (LeetCode, HackerRank), Exploring New Technologies, Open Source Contributions, Research Publications
